## **SPECIALIZED SAFETY PRODUCTS LAUNCHES COST-EFFECTIVE JET-KLEEN™ LIMITED**

***A safe, efficient, and highly effective alternative to  
compressed air systems***

CHICAGO, IL - Expanding its popular and successful **Jet-Kleen™** series of blow-off guns, **Specialized Safety Products (SSP)**, a division of the **A.W.T. World Trade Group**, is pleased to introduce the **Jet-Kleen Limited**, an economical alternative to compressed air systems including many of the same features that have made the **Jet-Kleen** series such a resounding success.

The new **Jet-Kleen Limited** Blow-Off System provides safe and effective removal of residues--such as dust, fibers, water, and particulate matter-- from people, surfaces, and work environments, at a fraction of the cost of compressed air systems. Responding to demand for a more economical model of their popular **Jet-Kleen™**, SSP developed the **Jet Kleen Limited** to deliver the many of the same features in a smaller, more cost-effective package.

The **Jet-Kleen Limited** utilizes a blower-driven system to deliver a high volume of air at an ultra-safe 1.9 psi, which is an effective pressure rating for many industrial applications. The safe alternative to compressed air, which can contain oil and particulate matter, the **Jet-Kleen Limited** provides clean air at low noise levels and is also safe for use in most institutional settings.

Some standard features of the original **Jet-Kleen**, such as the wall-mount bracket, swivel disconnect, and chip guard, are offered as options with the **Jet-Kleen Limited**, allowing you to select only those features suitable for your operation.

The **Jet-Kleen** is ideal for companies seeking to improve efficiency and employee safety. Although safe for individual use-it can be aimed directly at bare skin-the **Jet-Kleen** still delivers a powerful volume of oil-free, clean and dry air that quickly and effectively removes moisture. Compressed air contains dirt, oils, and water, so it actually emits the very substances a user is trying to remove. Additionally, using compressed air through a tiny aperture is time-consuming compared to the **Jet-Kleen's** nozzle opening of more than half an inch.

Other manufacturers have tried to duplicate the success of the **Jet-Kleen** series, but no other products can match the **Jet-Kleen's** proven quality and consistent results. To learn more about air gun performance without the dangers and costs of compressed air systems, check out the new **Jet-Kleen Limited** [click here.](#)

For more information on the Jet-Kleen™ system, contact Specialized Safety Products, 4321 N. Knox Ave., Chicago, IL; 773.777.7100, [sales@specializedsafetyproducts.com](mailto:sales@specializedsafetyproducts.com) or visit [www.specializedsafetyproducts.com](http://www.specializedsafetyproducts.com) for a direct link to more detailed product information.
